

BRAM ENTROP

Construction Management & Engineering

The research I conduct and supervise is on the interface between energy and buildings. It is embedded in the research institute PRESBE (Platform for Research on Energy for a Sustainable Built Environment). The aim of this platform is to communicate, conduct research and provide education about reducing the energy use of the built environment. Within this institute we use different methods to establish our goal, like monitoring, testing, experimenting, designing, improving and disseminating. PRESBE is located at the department of Construction Management and Engineering of the University of Twente. The platform is part of the Faculty of Engineering Technology.
